Cortex-M0 Technical Reference Manual

3.3. Instruction set summary

The processor implements the ARMv6-M Thumb instruction set, including a number of 32-bit instructions that use Thumb-2 technology. The ARMv6-M instruction set comprises:

- all of the 16-bit Thumb instructions from ARMv7-M excluding CBZ, CBNZ and IT
- the 32-bit Thumb instructions BL, DMB, DSB, ISB, MRS and MSR.

Table 3.1 shows the Cortex-M0 instructions and their cycle counts. The cycle counts are based on a system with zero wait-states.

[[]b] N is the number of elements.

 $^{^{[}c]}$ N is the number of elements in the stack-pop list including PC and assumes load or store does not generate a HardFault exception.

[[]d] 3 if taken, 1 if not-taken.

[[]e] Cycle count depends on core and debug configuration.

^[f] Excludes time spent waiting for an interrupt or event.

[[]g] Executes as NOP.
